self analysis is a fascinating reprise on the mode of disciplined self inquiry that gave rise to psychoanalysis from freud s pioneering self analytic efforts onward self analysis has been central to psychoanalytic training and psychoanalytic practice yet only in recent years have analysts turned their attention to this wellspring of freud s creation the contributors to self analysis represent diverse theoretical perspectives but they share a common appreciation of the importance of self analysis to the analytic endeavor their papers encompass systematic inquiries into the capacity for self analysis examples of self analysis as an aspect of clinical work and personal reflections on the role of self analysis in professional growth among the questions explored what do we mean by self analysis to what extent and under what conditions is self analysis possible how does it differ from

ordinary introspection what are the developmental antecedents of the capacity for self analysis what is the role of the other in self analysis what are the relationships among self analysis writing and creativity as barron observes the contributors to the book grapple with the formidable ambiguities of self analysis without either idealizing or devaluing its potential what emerges from their effort is not only an illuminating window into the psychoanalyst s subjectivity as a fact of clinical life but a far reaching exemplification of the ways in which self understanding is always a constitutive part of our understanding of others

modern mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems thus it is par excellence a model of rational inquiry links between cognitive psychology and mathematics education have been particularly strong during the last decades indeed the enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference yet these deviations should not be called errors as cognitive psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats humans as the cognitive psychologist and economist herbert simon claimed do not usually optimize but rather satisfice even when solving problem this research topic aims at demonstrating that these insights have had a decisive impact on mathematics education we want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program in simon s bounded rationality and its direct descendant ecological

seminar paper from the year 2019 in the subject didactics for the subject english pedagogy literature studies grade 2 university of applied sciences burgenland language english abstract the paper s primary concern is to outline strategies which teachers could use in order to support students in becoming self regulated by using language learning strategies maria montessori was one of the first pedagogues who emphasized independence a degree of student autonomy and learning strategies that highlight learning through action rather than lecture children have been seen as naturally eager for knowledge thus children are capable of initiating learning in a supportive thoughtfully prepared learning environment based on pedagogical observations it was discovered that children who were free to choose and act without restrictions within an environment prepared according to montessori s model would act spontaneously for optimal development unfortunately it is frequently observable that modern phenomena such as portable phones computers and television are a constant distraction even for young children and consequently tend to impede the students learning of self regulation

this book provides an innovative approach to understanding the governance of resource communities by showcasing how the past and present informs the future resource communities have complicated relationships with the past and this makes their relationship with the future and the future itself also complicated the book digs deeply into the myriad legacies left by a history of resource extraction in a community and makes use of interdisciplinary and transdisciplinary perspectives to understand the complex issues being faced by a range of different communities that are reliant on different types of resources across the world from coal and gold mining to fishing towns and logging communities the book explores the legacies of boom and bust economies social memory trauma and identity the interactions between power and knowledge and the implications for adaptive governance balancing conceptual and theoretical understandings with empirical and practical knowledge of resource communities natural resource use and social ecological relationships the book argues that solutions for individual communities need to be embraced in the community and not just in the perspectives of visiting experts linking the past present and futures of resource communities in a new way the book concludes by providing practical recommendations for breaking open dependencies on the past including deepening awareness of the social economic and environmental contexts establishing strong governance and developing community strategies plans and policies for the future this book will be of great interest to students and scholars of natural resource governance and management extractive industries environmental policy community planning and development environmental geography and sustainable development as well as

this study explores the relationship between the individual person the self the divine and other people in the writings of the apostle paul and the roman stoic epictetus it does so by examining self involving actions expressed with reflexive pronouns myself yourself etc in various kinds of sentences for example examine yourself and you do not belong to yourself after situating the topic within the fields of linguistics and ancient greek the study then examines the reflexive constructions in epictetus s discourses showing that reflexive texts express fundamental aspects of his ethic of rational self interest in imitation of the indwelling rational deity next the investigation examines the 109 reflexive constructions in paul providing an exegesis of each reflexive text and then synthesizing the results paul s reflexive phrases are essential statements of his theology and ethics expressing an interconnected narrative christology narrative apostolic identity and narrative ethic most importantly the study finds that for epictetus concern for others is a rational means to self realization whereas for paul concern for others is a community ethic grounded in the story of the indwelling christ and is the antithesis of self interest
